## Denise Coates e a História do Bwin: Um Olhar para a Indústria de Apostas Online

Denise Coates, fundadora e diretora executiva da Bet365, é uma empreendedora bilionária do Reino Unido, nascida em pix bet 12 26 de setembro de 1967. De acordo com a Forbes, a fortuna líquida estimada de Coates é de US\$ 7,7 bilhões em pix bet 12 julho de 2024.

A Bet365 é uma das maiores casas de apostas online do mundo e Denise Coates mantém uma participação majoritária na empresa. Ela é fundamental na operação da empresa desde a pix bet 12 fundação em pix bet 12 2000, contribuindo significativamente para o crescimento da indústria de apostas online.

### O Crescimento e a Evolução da Bet365

O sucesso da Bet365 não vêm sem desafios e adversidades. No entanto, a visão e liderança de Coates levaram a empresa a prosperar e expandir suas operações em pix bet 12 todo o mundo. Além disso, seu compromisso em pix bet 12 fornecer uma excelente experiência ao cliente e uma ampla gama de opções de apostas online ajudou a consolidar a pix bet 12 posição no mercado.

### A História do Bwin

Bwin foi uma das primeiras empresas de apostas online a se tornar pública, listada na Bolsa de Valores de Viena em pix bet 12 março de 2000. Em fevereiro de 2024, a GVC Holdings adquiriu a empresa, que continua a usar a marca Bwin até hoje.

A história do Bwin envolve uma trajetória de crescimento e transformação, refletindo as mudanças e desafios do setor ao longo dos anos. Atualmente, o Bwin oferece jogos de casino online, apostas esportivas e outras opções de entretenimento virtual.

### Impacto na Indústria de Apostas Online no Brasil

A indústria de apostas online tem crescido significativamente no Brasil, trazendo consigo oportunidades e desafios. Com a influência da Denise Coates e a história do Bwin, o ramo tem se desenvolvido, oferecendo uma gama de opções de apostas e entretenimento online para os brasileiros.

No entanto, é importante ressaltar que a legislação brasileira ainda não é clara em pix bet 12

relação às apostas online, o que pode tornar difícil para as empresas operarem legalmente.

- Crescente interesse nos jogos de azar e apostas no Brasil
- Regulamentação pouco clara em pix bet 12 torno das apostas online
- Definindo as necessidades e expectativas dos consumidores brasileiros

Probability The probability of winning with each bet

Here are a bunch of charts and tables for different probabilities in both European and American roulette.

There's also some handy (but not necessarily easy) information at the bottom about working out roulette probabilities, plus a little bit on the gambler's fallacy.

#### 1. European roulette

Probability of each bet type winning on a European roulette wheel.

Bet Type	Fraction	Ratio	Percentage
Even (e.g. Red/Black)	1/2	1.06 to 1	48.6%
Column	1/3	2.08 to 1	32.4%
Dozen	1/3	2.08 to 1	32.4%
Six Line	1/6	5.17 to 1	16.2%
Corner	1/9	8.25 to 1	10.8%
Street	1/12	11.33 to 1	8.1%
Split	1/19	18.50 to 1	5.4%
Straight	1/37	36.00 to 1	2.7%

A simple bar chart to highlight the percentage probabilities of the different bet types in roulette coming in.

The same color in a row

How unlikely is it to see the same color 2 or more times in a row? What's the probability of the results of 5 spins of the roulette wheel being red? The following chart highlights the probabilities of the same color appearing over a certain number of spins of the roulette wheel.

A graph to show the probability of seeing the same color of red/black (or any evens bet result for that matter) over multiple spins.

Number of Spins	Ratio	Percentage
1	1.06 to 1	48.6%
2	3.23 to 1	23.7%
3	7.69 to 1	11.5%
4	16.9 to 1	5.60%
5	35.7 to 1	2.73%
6	74.4 to 1	1.33%
7	154 to 1	0.65%
8	318 to 1	0.31%
9	654 to 1	0.15%
10	1,346 to 1	0.074%
15	49,423 to 1	0.0020%
20	1,813,778 to 1	0.000055%

Example: The probability of the same color showing up 4 times in a row is 5.60% .

As the graph shows, the probability of seeing the same color on consecutive spins of the roulette wheel more than halves (well, the ratio probability doubles) from one spin to the next.

I stopped the graph at 6 trials/spins, as that was enough to highlight the trend and produce a prettier probability graph.

Other probabilities

Event	Ratio	Percentage
The same number (e.g. 32 ) over 2 spins.	1,368 to 1	0.073%
The result being 0 .	36 to 1	2.7%
The 0 appearing at least once over 10 spins.	2.7 to 1	27.0%
The same color over 2 spins.	3.23 to 1	23.7%
Guessing color and even/odd correctly.	3.11 to 1	24.3%
Guessing color and dozen correctly.	5.16 to 1	16.2%
Guessing dozen and column correctly.	8.25 to 1	10.8%

Rank Casino Rating Payment Methods Payout Time Links No casinos available :(

#### 2. American roulette

Here are a few useful probabilities for American roulette.

Alongside the charts, I've included graphs that compare the American roulette probabilities to those of the European roulette probabilities. The difference in odds and probability for these two variants is explained in the American vs. European probability section below.

Probability of each bet type winning on an American roulette wheel.

Bet Type	Fraction	Ratio	Percentage
Even (e.g. Red/Black)	1/2	1.11 to 1	47.4%
Column	1/3	2.16 to 1	31.6%
Dozen	1/3	2.16 to 1	31.6%
Six Line	1/6	5.33 to 1	15.8%
Corner	1/9	8.50 to 1	10.5%
Street	1/12	11.67 to 1	7.9%
Split	1/19	18.00 to 1	5.3%
Straight	1/38	37.00 to 1	2.6%

A simple bar chart to highlight the percentage probabilities of winning with the different bet types in American and European roulette.

The same color in a row

When playing on an American roulette wheel, what's the probability of seeing the same color appear X times in a row? The table below lists both the ratio and percentage probability over successive numbers of spins.

A graph to show the probability of seeing the same color of red/black on an American roulette table (compared to the odds on a European table).

Number of Spins	Ratio	Percentage
1	1.11 to 1	47.4%
2	3.45 to 1	22.4%
3	8.41 to 1	10.6%
4	18.9 to 1	5.04%
5	40.9 to 1	2.39%
6	87.5 to 1	1.13%
7	186 to 1	0.54%
8	394 to 1	0.25%
9	832 to 1	0.12%
10	1,757 to 1	0.057%
15	73,732 to 1	0.0014%
20	3,091,873 to 1	0.000032%

Example: The probability of the same color showing up 6 times in a row on an American roulette wheel is 1.13% .

The probability of seeing the same color appear on successive spins just over halves from one spin to the next.

You'll also notice that it's less likely to see the same color appear on multiple spins in a row on an American roulette wheel than it is on a European wheel. This is not because the American wheel is "fairer" and dishes out red/black colors more evenly — it's because there is an additional green number (the double zero - 00) that increases the likelihood of disrupting the flow of successive same-color spins.

Other probabilities

Event	Ratio	Percentage
The same number (e.g. 32 ) over 2 spins.	1,444 to 1	0.069%
The result being 0 or 00 .	18 to 1	5.26%
The 0 or 00 appearing at least once over 10 spins.	0.9 to 1	52.6%
The same color over 2 spins.	3.45 to 1	22.4%
Guessing color and even/odd correctly.	3.22 to 1	23.7%
Guessing color and dozen correctly.	5.33 to 1	15.8%
Guessing dozen and column correctly.	8.5 to 1	10.5%

3. Why is there a difference between European and American roulette?

The probabilities in American and European roulette are different because American roulette has an extra green number (the double zero - 00), whereas European roulette does not.

Therefore, the presence of this additional green number ever so slightly decreases the probability of hitting other specific numbers or sets of numbers, whether it be over one spin or over multiple spins.

To give a simplified example, lets say I have a bag with 1 red, 1 black and 1 green ball in it. If I ask you to pick out one ball at random, the probability of choosing a red ball would be 1 in 3.

Now, if I added another green ball so that there are now 2 green balls in the bag, the probability of picking out a red ball has dropped to 1 in 4.

This exact same idea applies to all the probabilities in American roulette (thanks to that extra 00 number), just on a slightly bigger scale.

Fact: This difference in the probabilities also has a knock-on effect for the house edge too. So essentially, in American roulette you have a slightly worse chance of winning, but the payouts remain the same.

Note: You can find out more about the differences between these two games in my article American vs European roulette.

4. Mathematics

a. Formats

There are a number of ways to display probabilities. On the roulette charts above I have used; ratio odds, percentage odds and sometimes fractional odds. But what do they mean?

Percentage odds (%) This is easy. This tells you the percentage of the time an event occurs.

Ratio odds (X to 1) For every time X happens, the event will occur 1 time.

Example: The ratio odds of a specific number appearing are 36 to 1, which means that for every 36 times the number doesn't appear, it will appear 1 time. Fractional odds (1/X) The event occurs 1 time out of X amount of trials.

Example: The fractional odds of a specific number appearing are 1/37, which means that it will happen 1 time out of 37 spins.

As you can see, fractional odds and ratio odds are pretty similar. The main difference is that fractional odds uses the total number of spins, whereas the ratio just splits it up in to two parts.

The majority of people are most comfortable using percentage odds, as they're the most widely understood. Feel free to use whatever makes the most sense to you though of course. They all point to the same thing at the end of the day.

#### b. Calculating

From my experience, the easiest way to work out probabilities in roulette is to look at the fraction of numbers for your desired probability, then convert to a percentage or ratio from there.

For example, let's say you want to know the probability of the result being red on a European wheel. Well, there are 18 red numbers and 37 numbers in total, so the fractional probability is  $18/37$ . Simple.

With this easy-to-get fractional probability, you can then convert it to a ratio or percentage.

##### Single spin

Calculation: Count the amount of numbers that give you the result you want to find the probability for, then put that number over 37 (the total number of possible results).

For example, the probability of:

Red =  $18/37$  (there are 18 red numbers)

Even =  $18/37$  (there are 18 even numbers)

Dozen =  $12/37$  (there are 12 numbers in a dozen bet)

8 Black =  $1/37$  (there is only one number 8)

) Red and Odd =  $9/37$  (there are 9 numbers that are both red and odd)

Dozen and Column =  $4/37$  (there are only 4 numbers in the same dozen and column)

As well as working out the probability of winning on each spin, you can also find the likelihood of losing on each spin. All you have to do is count the numbers that will result in a loss. For example, the probability of losing if you bet on red is  $19/37$  (18 black numbers + 1 green number).

Note: To reduce a fraction down to  $1/X$ , just divide each side by the number on the left. e.g. a bet on red has the probability of  $18/37$ , divide each side by 18 and you've got  $1/2.05$ .

##### Multiple spins

Calculation: Work out the fractional probability for each individual spin (as above), then multiply those fractions together.

For example, let's say you want to find the probability of making correct guesses on specific bet types over multiple spins:

Spin 1: Red =  $18/37$

Spin 2: Dozen bet =  $12/37$

Probability =  $(18/37) \times (12/37) = 1/6.34$

Spin 1: Straight Bet (e.g. 32) =  $1/37$

) =  $1/37$  Spin 2: Straight Bet (e.g. 15) =  $1/37$

) =  $1/37$  Probability =  $(1/37) \times (1/37) = 1/1369$

Spin 1: Black and Even =  $9/37$

Spin 2: Odd =  $18/37$

Spin 3: Column =  $12/37$

Probability =  $(9/37) \times (18/37) \times (12/37) = 1/26.06$

To keep it simple, I reduced the all fractions for the results above down to the  $1/X$  format.

#### c. Converting

Having probabilities in a fraction format like  $18/37$  or  $1/2.05$  is okay, but sometimes it's more useful to see the probability as a percentage or a ratio. Luckily, it's pretty easy to convert to either of these from a fraction.

##### Fraction to ratio

Conversion: Reduce the fraction to the  $1/X$  format, then take 1 away from X. This will give you the X to 1 ratio.

For example, what is a dozen bet ( $12/37$ ) as a ratio?

Reduce the fraction to  $1/X$ .  $12/37 = 1/3.08$  (you divide both sides by the left-hand side number, which in this example is 12) Take 1 away from X.  $3.08 - 1 = 2.08$  Ratio = 2.08 to 1

##### Fraction to percentage

Conversion: Divide the left side by the right side, then multiply by 100.

For example, what is a corner bet (4/37) as a percentage?

Divide the left side by the right side.  $4 \div 37 = 0.1081$  Multiply by 100.  $0.1081 \times 100 = 10.81\%$

Percentage = 10.81%

5. Important fact about probability

The result of the next spin is never influenced by the result of previous spins.

A quick example

The probability of the result being red on one spin of the wheel is 48.6%. That's easy enough.

Now, what if I told you that over the last 10 spins, the result had been black each time. What do

you think the probability of the result being red on the next spin would be? Higher than 48.6%?

Wrong. The probability would be exactly 48.6% again.

Why?

The roulette wheel doesn't think "I've only delivered black results over the last 10 spins, I better increase the probability of the next result being red to even things up". Unfortunately, roulette wheels are not that thoughtful.

If you had just sat down at the roulette table and didn't know that the last 10 spins were black, you wouldn't have a hard time agreeing that the probability of seeing a red on the next spin is 48.6%.

Yet if you are aware of recent results, you're tempted to let it affect your judgment.

Each and every result is independent of the last, so don't expect the results of future spins to be affected by the results you've seen over previous spins. If you can learn to appreciate this fact, you will save yourself from some disappointment (and frustration) in the future.

Believing that a certain result is "due" because of past results is known as the gambler's fallacy.

What about those graphs above?

In the graph of the probability of seeing the same color over multiple spins of the wheel, it shows that the probability of the result being the same color halves from one spin to the next.

However, this is only if you're looking at the entire set of trials/spins from the start.

If the last spin was red, the chances of the next spin being red are still 48.6% — they do not drop to 23.7%. On the other hand, if you hadn't spun the wheel to see the first red result and wanted to know the probability of seeing red over the next 2 spins (and not just on the next 1 spin), the probability would be 23.7%.

O capitão do Glasgow Warriors, Kyle Stern saudado esforço coletivo de seu lado como eles levantaram o título United Rugby Championship após uma vitória duramente disputada 21-16 sobre os Bull pix bet 12 um esgotado Loftus VerSfeld Stadium.

As tentativas de Scott Cummings, George Turner e Huw Jones foram convertida por Jorge Horne. Todos os Warrior' resforam coroados campeões pela primeira vez desde 2024, após uma luta dramática pix bet 12 2024. Em um ponto eles seguiram o Bull 13-0, graças a duas penalidade

do Johan Goosen com conversão para Marco van Staden na tentativa da vitória; também acrescentou outra pena no segundo semestre:

Steyn disse Premier Sports: "Estou tão orgulhoso dos caras. Crédito para os Bulls, eles saíram atirando na frente de seus fãs e nos colocar sob pressão". Estou muito orgulhosa da crença do meu pessoal que não importa o quê foi jogado pix bet 12 nós nas últimas três semanas Não importam as coisas jogada no nosso lado elas ficaram presas nisso!

"A mudança defensiva no final, alguns dos hits na frente... estou sobre a lua. Para entrar pix bet 12 meio tempo 13-7 para baixo íamos ter tomado isso depois da primeira metade que tínhamos tido e nos assentamos muito bem com o segundo semestre". Nós aumentavamos de intensidade um pouco mais alto."

Tendo vencido os Stormers e o atual campeão, Munster para chegar à Grande Final dos Warriors evitaram uma terceira derrota na peça com um desempenho fantástico pix bet 12 Pretória.

O treinador principal, Franco Smith disse: "Os meninos jogaram bem e compraram. A conversa foi fácil no intervalo de tempo do bate-papo! Sabíamos que tínhamos um bom plano para o segundo semestre; deixámo -los entrar através dos nossos próprios erros... eles ficaram presos ao script."

"Há muito a ser dito sobre o limite das equipes europeias e trouxemos esta noite, especialmente nos últimos 10-15 minutos. Defendeu nossa linha bem para aplicar muita pressão ao maul". Os meninos se enfrentaram pix bet 12 uma equipe sul-africana com 50 mil pessoas atrás deles." Eles podem estar orgulhosos".

Huw Jones faz uma tentativa para Glasgow Warriors contra os Bull.

{img}: Phill Magakoe/AFP /Gotty {img} Imagens

Ele acrescentou: "Esta equipe não deve ser feita depois desta noite. Temos os blocos de construção para ir ainda mais longe."

skip promoção newsletter passado

após a promoção da newsletter;

Matt Fagerson, que foi nomeado o jogador do jogo disse: "Palavras não podem descrever como estamos nos sentindo agora. É algo para qual temos trabalhado durante toda a temporada e fazê-lo pix bet 12 um lugar tão histórico quanto este na frente de todos esses fãs é Não posso colocá-la nas palavras!

"Acho que nos últimos três ou quatro jogos, nós realmente gostamos de rugby nocaute no sentido pix bet 12 não estamos exagerando a bola e quando você tem um kicker como George Horne. Isso torna as coisas muito mais fáceis: fomos na direção difícil mas nunca mudaríamos para o mundo."

O único sobrevivente do pelotão vencedor de 2024 Duncan Weir, foi um substituto não utilizado mas cheio orgulho dos seus companheiros. Ele disse: "Inacreditável! A luta pelas tripas e o sangue fizeram tudo esta noite... Estou muito orgulhoso por fazer parte desta equipa; vai ser uma boa festa hoje à tarde."
